

**7SEtronic**

Reliable Sourcing Partner  
for Your Production

# Components + PCBA. One Partner.

Full-range  
components supply

PCBA support  
for faster production

Flexible solutions  
for OEM / EMS

365-day warranty  
for every order

Hard-to-find  
parts, sourced

Global  
sourcing

Fast  
delivery

Genuine  
& reliable

CONTENTS

7SEtronic is based in Huaqiangbei, Shenzhen — one of the most active electronic component trading hubs in the world, with an additional presence in Hong Kong.

With over 10 years of experience, we act as a sourcing partner for OEMs, EMS providers, and design houses.

We specialize in the sourcing and supply of integrated circuits and other electronic components, including hard-to-find and obsolete parts. Our products are used across industrial, telecom, automotive, medical, new energy, and consumer electronics applications.

In addition, we offer a range of value-added services, including spot buying, quality checking, BOM kitting, and excess stock transactions — helping customers better manage cost, lead time, and supply risk.

We aim to build long-term, reliable partnerships by focusing on practical support rather than empty promises.

## From Marketplace to Direct Partnership

Before launching our independent website, 7SEtronic operated on Alibaba as a verified Gold Supplier.

This required:

- Company verification and compliance checks
- Transaction history with international buyers
- Consistent delivery and service performance

As our business developed, we gradually shifted towards direct communication and long-term cooperation through our own platform.

# Product category

## Capacitors

Used for energy storage, filtering, and voltage stabilization

## Sensors & Transducers

For measurement, detection, and real-time environmental or system monitoring

## Crystals, Oscillators, Resonators

Providing precise timing and frequency control for system synchronization

## Connectors & Interconnects

Enabling stable electrical connections and reliable system integration

## Integrated Circuits (ICs)

For control, processing, power management, and signal handling in electronic systems

## Resistors

For current control, voltage division, and signal conditioning

## Optoelectronics

For light-based sensing, indication, and signal transmission

## Relays

For electrical isolation and switching in control and power circuits

## Switches

For manual or automatic control of circuit operation

# APPLICATION SCENARIOS

## Additional Support for PCBA Projects

In addition to component sourcing, we have expanded our support to include PCBA services. Through close cooperation with selected manufacturing partners, we can support customers who require both component supply and assembly coordination.

### How we typically support:

- Component sourcing + PCBA coordination in one flow
- Support for small-batch and prototype builds
- Flexible handling of mixed or time-sensitive projects

We do not position ourselves as a manufacturer. Instead, we work with trusted partners to provide a more connected and efficient sourcing + assembly experience.

One point of contact — from parts to assembled boards.
